HUNG LUU

PERSONAL DETAIL

Full name: Luu The Hung
Gender: Male

EDUCATION

- Ho Chi Minh City University of Natural Resources and Environment

EXPERIENCE SUMMARY

- More than 2 years of experience in software web/application development.
- Experienced on lot of projects of web development in various different genres since 2019.
- Good working experience includes: Object-oriented methodology, developing projects in ReactJS, Typescript, NextJS, Javascript, NodeJS, PHP, Jquery, HTML, CSS
- High-pressure working environments.
- Confident to communicate with customers on working projects and systems

TOP SKILLS

- Problem Solution Resolving.
- Ability to work well under pressure.
- Focus on the problems, well support.
- Open-minded, hard-working and fast learning.

TECHNICAL SKILLS

LANGUAGES & SCRIPTING	ReactJS, TypeScript, NextJS, JavaScript, NodeJS, PHP, HTML, CSS, jQuery
OPERATING SYSTEMS	Windows, Linux, Docker
DATABASES	MySQL, PostgreSQL, MongoDB...
WEB SERVERS	Nginx, Apache
SOURCE MANAGEMENT	GIT, GitHub, Gitlab
DEVOPS TOOLS	Docker

CAREER HISTORY AND EXPERIENCE

Dec.2022 – Present	Middle Developer

NG-Words - Japan Customer	Develop a program to detect bad words from agents, customer care to customers and vice versa to increase satisfaction as well as select employees with bad attitudes

Responsibilities

- Analyzed the project's source code to find the specific part of the source code that caused the problem.
- Perform core functions.
- Perform functions as required.
- Risk analysis and solutions
- Handle daily reports working with managers.
- Writing documentation
- Full stack programmer

Technologies used in project

- NodeJS, EJS, HTML/CSS, Typescript
- TypeORM, MVC
- Github, CI-CD
- Visual Studio Code
- MySQL

July.2022 – Dec.2022	Junior Developer

OpenSend - United states Customer	Build a marketing automation and management software for small and medium companies using email marketing. It tracks, personalizes, automates, and manages email marketing campaigns. Moreover, it provides users with better interaction with customers by using data-driven messaging based on visitor behavior, such as website visits, history, etc. , etc. Purchase. , refund, etc.

Responsibilities

- Developed Frontend using React framework, handle more and check to conver the current coreUI to Ant design library
- Analyzed the project's source code to find the specific part of source code that's causing the problem.
- Implementing the core function.

- Implement function following the requirement.
- Risk analysis and solutions
- Daily Report processing working with the manager.
- Full stack developer

Technologies used in project

- ReactJS, React Hook, Ant Design, HTML/CSS, Typescript
- NodeJS, Prisma, MVC
- EC2, Elastic Cloud, AWS
- PostgreSQL

Mar.2022 – Aug.2022	**Junior Developer**
Web3 - United states Customer	This software is a tool to introduce virtual currencies and issuers of virtual currencies. It offers a customizable website to register, track the status and rank of cryptocurrencies, combines highly refined automated processes, the personalization of human intelligence, and the meaningful utility of blockchain technologies, to give you an unparalleled edge .

Responsibilities

- Analyzed the project's source code to find the specific part of source code that's causing the problem.
- Implement function following the requirement.
- Risk analysis and solutions
- Daily Report processing working with the manager.
- Frontend Developer

Technologies used in project

- NextJS, Tailwindcss, HTML/CSS, Typescript
- Graphql, Hasura,
- EC2, Elastic Cloud, AWS
- PostgreSQL
- Docker

Jul.2021 – Present	**Junior Developer**

Instamate - United states Customer	It is a customer service platform related to cosmetic surgery. The system is allowed customer to make appointment, select procedures services, discussion with doctors. Balance AI automation and the human touch with chatbots generate leads, create help tickets, and chat across channels. Automatically segment visitors based on what they do on the sale site.

- Monitor the state of lead
- Monitor tickets of lead
- Monitor the procedures related to customer

Responsibilities

- Find solution and support team as project transferor
- Analyzed the project's source code to find the specific part of source code that's causing the problem.
- Developed Frontend using ReactJS framework
- Developed core function API
- Daily report process working to Scrum master / PO

Technologies used in project

- ReactJS, React Hook, Jquery, HTML/CSS, Bootstrap, Doar theme
- PHP Laravel / Nova
- Docker, GITHub, Netlify, CI/CD
- MySQL
- Visual Studio Code

Apr.2021 – Jul.2021	**Developer**
LMS - Loan / Loaner Managment System	This software is a management tool for brokers and loan originators. It provides a customizable website for online loan application and processing, loan-status monitoring, alerts, and a loan portal to manage their loaner.

Responsibilities

- Analyzed the project's source code to find the specific part of source code that's causing the problem.
- Developed Frontend using React framework, handle more and check to conver the current source code to NextJS
- Daily Report processing working with the manager.
- Full stack developer

Technologies used in project

- ReactJS, React Hook, HTML, CSS3, Bootstrap
- Typescript, JQuery
- Docker
- Visual Studio Code

Oct.2020 – Jan.2021	**Developer**

Car/Motor Reparing – Japan Customer	The project aims to help users find the nearest motorbike repair location when they encounter an incident. Support more over functions: • Monitoring the status of car • Scheduling on car/motor reparing • Process payment online ***Responsibilities*** • Analyzed the project's source code to find the specific part of source code that's causing the problem. • Developed Frontend using ReactJS framework • Daily Report processing working with the manager. • Full stack developer ***Technologies used in project*** • ReactJS, React Hook, HTML, CSS3, Bootstrap • Typescript, Jquery • PHP Laravel framework • Docker • PostgreSQL

Apr.2020 – Sep.2020	**Developer**

OPBD (Operation Breakdown) - Japan Customer	This is a web-based project captures all elements of projects in an organized fashion. Breaking down large, complex projects into smaller project pieces provides a better framework for organizing and managing current and future projects. ***Responsibilities*** • Requirement analysis • Implement function following the specification.

- Full stack development

Technologies used in project

- Java, Jhipster, MVC, JPA
- Docker
- MySQL
- ReactJS, HTML5, CSS3, jQuery, Typescript

VO NGOC PHU

INTRODUCTION

Date of birth: 25/04/1996
Gender: Male
Current position: **Senior Software Engineer (PHP)**
Years of experience: **5** years
Projects: **10+**

I am a **Senior Software Engineer (PHP)**. I currently live and work in Ho Chi Minh City. I love technology, especially web technologies. I always have the desire to learn new knowledge.

I like to help people, exchange and share experiences with others to solve problems. For me, the goal every day is to become better, constantly learn and grow.

OBJECTIVE

- Constantly learning new knowledge about technology
- Practice more skills in people management, resource management
- Create high quality software products
- My orientation in the next 3 years is to become a Technical Lead

EDUCATION

Thu Duc College Of Technology   Aug 2016 - May 2019

Major: Infomation technology

School curriculum:
- Was trained in general knowledge of the software industry, programing language, network, OS, ...
- Was trained in popular technologies used today such as C ++, C # / ASP.NET, Java / Android, PHP / Laravel / WordPress, Javascript / jQuery and some databases like MySQL, MS SQL Server....
- Was trained in soft skills, english, team work, thinking ability, and problem solving...

GPA: 7.5/10
2 times to achieved scholarships for good students
Won 1st in a web design competition

SKILLS

PHP	Skill level 8/10
Laravel Framework	Skill level 8/10
MySQL	Skill level 8/10
PostgreSQL	Skill level 8/10
MongoDB	Skill level 7/10
Redis	Skill level 8/10
Job/Queue	Skill level 8/10
ElasticSearch	Skill level 6/10
HTML	Skill level 8/10
CSS	Skill level 7/10
Javascript	Skill level 8/10
Bootstrap	Skill level 7/10
NodeJS	Skill level 7/10
Express	Skill level 7/10
NestJS Framework	Skill level 6/10
ReactJS	Skill level 6/10
TypeScript	Skill level 6/10

jQuery	Skill level 8/10
Git	Skill level 8/10
Linux	Skill level 7/10
Docker	Skill level 7/10
English	Basic comunication in English Read and write English documents well

WORK EXPERIENCE

FireGroup Technologies JSC   May 2021 - Present
Position: Senior Software Engineer (PHP)

FireGroup is a technology startup, specializing in the development of technology products such as web applications, web extentions. There are many e-commerce products on platforms like Shopify, Shopbase, AliExpress,...

Team size: 15 members

PROJECTS:
1/ Ali Hunter
Website: https://alihunter.io/
Ali hunter is a **E-commerce Web Application**, the main function is to help merchants find product information on the market, which shops are selling that product, and the quantity sold. For example, some main functions such as live orders, sales track, find competitors, etc.

Responsibilities:
- Work on Back-end side, write API to handle requests from Front-end
- Build payment and pricing plans function (Paypal/Paddle)
- Build user permission function

Applied technologies: PHP / Lumen, MySQL, MongoDB, NodeJS, SocketIO, Restful API, Redis, Docker

2/ Ali Orders
Website: https://aliorders.fireapps.io/
Ali Orders is a **E-commerce Web Application**, supporting Shopify platform. App for merchants operating in the field of DropShipping. The main function of the app is to import products from AliExpress, push these products to Shopify stores, sync orders from Shopify, and fulfill these orders.

 Responsibilities:
- Work on Back-end side, wrote API to handle requests from Front-end
- Write API updating order information
- Build order fulfillment function based on AliExpress API
- Monitor the system and fixed bugs

Applied technologies: PHP / Laravel, MySQL, Job/Queue, Restful API, Redis, Docker, Pusher.

3/ DropSquare
DropSquare is simply a system that merges two products Ali Hunter and Ali Orders. DropSquare has been completely rewritten, has a completely new interface, has all the functions of Ali Hunter and Ali Orders, including 2 main function modules, Researching and Order Fulfillment.

Responsibilities:
- Work on Back-end side, wrote API to handle requests from Front-end
- Rewrite order fulfillment function
- Rewrite payment, pricing plans, custom plan functions (Paypal/Shopify/Paddle)
- Migrate payment data from Ali Hunter and Ali Orders to DropSquare
- Migrate pricing plans to new version (migrate user quotas and pricing plans)
- Monitore the system and fix bugs

Applied technologies: PHP / Laravel, MySQL, MongoDB, Restful API, Redis, Docker, Kubernetes, Paddle/Shopify service

4/ Flowio
Website: https://flowio.app/

Flowio is a **E-commerce Web Application**, support multiple platforms (Shopify, Shopbase, …), with many functions to support merchants in managing users and converting those users into orders. For example, some functions such as: Pop-up, Email marketing, Automation Flow, etc.

Responsibilities:
- Work on the Back-end side, setup APIs to handle request from Front-end
- Build payment functions, pricing plans (PayPal/Paddle)
- Build real-time chat function on the app
- Build the function of sending email marketing (Postmark)
- Build user permissions

Applied technologies: PHP / Laravel, MySQL, MongoDB, NodeJS, SocketIO, Restful API, Redis, Docker

---

Viet Vang JSC Mar 2020 - Apr 2021
Position: Software Engineer (PHP)

Viet Vang is a software company, specializing in consulting and providing software solutions for customers

Team size: 10 members

PROJECTS:
1/ Zonecode
Zoncode is an mobile application for sellers that connect directly to the Amazon Japan marketplace.

Responsibilities:
- Build mobile app interface base on customer design (using JSX)
- Handle app logic, call API to server, authenticate users, backup data on APP
- Connect Amazon MWS API to sell or search for products

Applied technologies: Linux / CentOS, Apache / Nginx, Javascript / React Native, PHP / Laravel, Restful API, JWT, Amazon MWS, ...

2/ Itumo
Itumo is a website that connects sellers and buyers.

Responsibilities:
- Build a dev environment with docker.
- Edit website layout, change colors, font size, ...
- Check the overall processing logic of the system, fix errors that arise.

Applied technologies: PHP / Laravel, MySQL, HTML, CSS, Javascript, Docker

---

P.A Viet Nam LTD May 2019 - Mar 2020
Position: Junior Software Engineer (PHP)

PA Viet Nam is a company providing domain services and software solutions.

Team size: 4 members

PROJECTS:
1/ Livechat service
Livechat is a system that provides online chat service, allowing to integrate online chat feature into customer's website.

Responsibilities:
- Edit UI in the management screens
- Build functions to cache data, optimize upload image sizes, improve page load speed
- Check and fix errors that arise every day.

Applied technologies: PHP, MySQL, HTML, CSS / Bootstrap, Javascript / jQuery

2/ Support system

Support system is a system that supports, receives requests from customers, manages service information, orders, manages personnel, and manages automatic tools.

Responsibilities:
- Edit interface on management screens.
- Updat the domain name related service information management functions.
- Check and fixed errors that arise every day.

Applied technologies: PHP, MySQL, HTML, CSS / Bootstrap, Javascript / jQuery
